

Certificate of conformation

The Quality of our products and services have the highest priority for us.

- **Quality Management**

Herewith we confirm that our enterprise is developing the established Quality Management System following to the international standard EN ISO 9001:2015. However a certification is not planned in the near future.

- **Quality Assurance**

The quality of our products is continuously monitored. 100% control from manufacture to the automatic testing under real operating conditions guarantees the highest reliability.

- **Warranty**

35 years Plug & Play Technology and 25 years of the Tango and the large Unistats. Many years of experience with minimal failures have allowed us to extend our warranty conditions. Since the 1.1.2000 we have extended our warranty on the refrigeration system to 2 years.

If you register your unit serial number with us (www.huber-online.com), you will receive the following warranty conditions:

- 3 Years warranty on exchangeable electronic controllers (Plug & Play),
- 2 Years warranty on the refrigeration technology (including compressors) and
- 2 Years warranty on the mechanical and electrical components.

Please note that these extended warranty conditions will not necessarily be adopted by our foreign service partners. Please speak to our distributors regarding the conditions being offered.

- **Service**

Service begins with our Advisors. However, just as important to us is our After-Sales Support. Our Hotline is available from 8:00 to 18:00. If you would like us to install or service your unit, then call us or contact our Service-Center. Our specialists in Thermodynamics and Microelectronics are at your disposal. Using modern diagnostic systems all of the integral functions of our Unistats can be monitored. Three memory systems store information on the running conditions and possible causes of a fault, and so allow a quick and accurate diagnosis in the event of a problem.

- **CE-Conformity**

Of course our units comply with the relevant EU guidelines and specific default values of the high national, European and international standards. The conformity to the legal protection demands of our units are to be certified by the technical instructions sent with every unit as well as by the CE-mark on the unit.

Best Regards
Peter Huber
